

## **CARY Super Vac Portable and Stationary Vacuum Systems**

The **CARY Super Vac System** is designed to provide years of trouble-free service and continuous duty in industrial applications. Two versions are available, the portable unit which is mobile and can be moved to any location and the stationary unit for central vacuum headers or limited area cleanups.

The **CARY Super Vac System** were designed and developed for efficient clean up and removal of light weight waste. The systems have been used to pick up and clean areas of: textile waste, fibers and lint, fiberglass, crumbs, cereals, sawdust and wood chips, including dust and dirt.

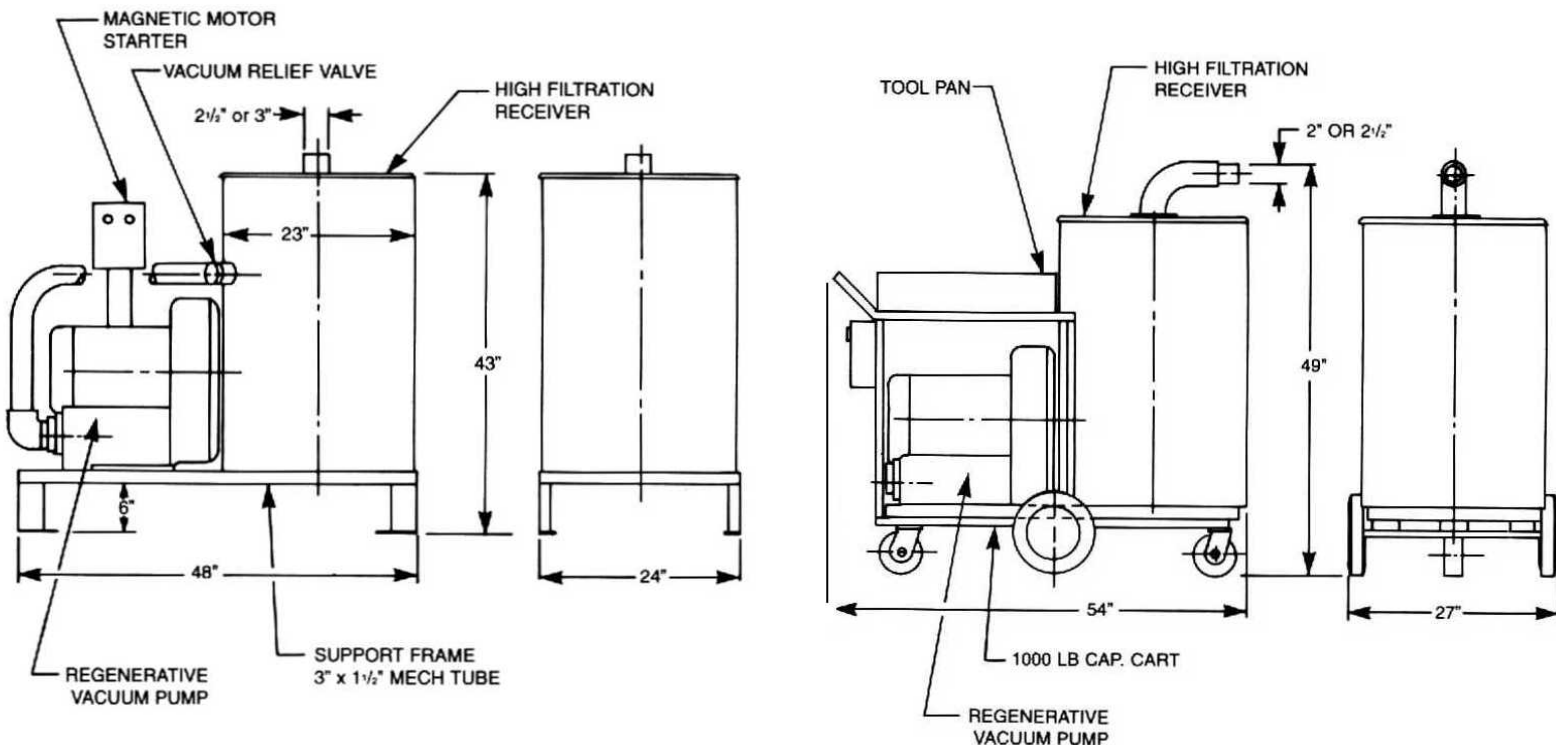

A Canton flannel (cotton flannel on canvas) filter bag, with a filtration area of 2400 sq. inches accomplishes the vacuum receiver filtration. The filter bag is clamped into the receiver and is supported by a perforated cylinder. The disposable/reusable bags, also, provide filtration and are placed inside the Canton flannel filter bag. The vacuum receivers are "top-loading." The waste products are collected in 10 mil Serex disposable/reusable bags. The bags are lifted up and out to empty.

### **CARY Super Vac Portable and Stationary Systems feature:**

- High Capacity, 7.9 Cu. Ft.
- Stationary and Portable Configurations
- No Maintenance Required
- Low Noise
- High Air Flow and Suction
- Highly Reliable Fuji Regenerative Blower
