CARY CYCLO-SEPARATOR/FILTER VACUUM SYSTEM

The **CARY** Cyclo-Separator/Filter Vacuum System was designed for industrial and commercial applications requiring powerful and efficient clean-up of dirt and/or heavy materials. Ideal for metal chips, oily waste, or fine talc & carbon dust applications where capture & filtration is important. The Cyclone//Separator removes most dirt, dust, or other materials and drops them into a 30-gallon receiver that is mounted on a drum dolly for ease of dumping waste materials. The Cyclone Lid is mounted on the frame with an easy-to-use lifting mechanism that allows the receiver to easily roll out.

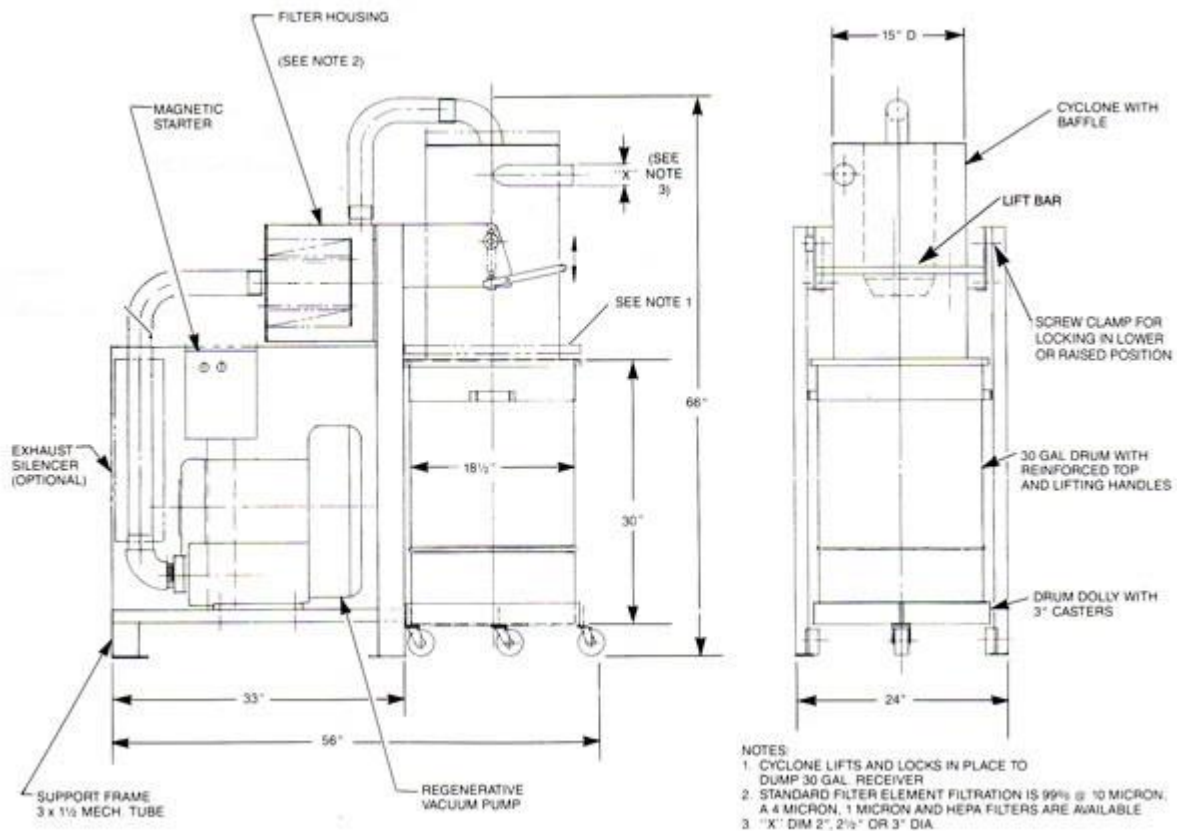

Any carry-over dust is filtered by a highly efficient pleated filter element before it can get into the ring compressor. The standard filter element filtration is 99% efficient @ 10 micron (4-micron, 1 micron and HEPA filter elements are available). The system also comes with an additional silencer/muffler for quiet operation.

CARY CYCLO-SEPARATOR/FILTER VACUUM SYSTEM

SPECIFICATIONS:

Model Number	CS/FV801S	CS/FV901S
Motor Horsepower	10.7 HP	14.7 HP
Maximum Vacuum	112 inches H2O	110 inches H2O
Waste Capacity	30 Gallons	30 Gallons
Magnetic Motor Starter	Yes	Yes
Voltage	230/460/575 VAC	230/460/575 VAC
Phase	3	3
Frequency	60/50	60/50
Weight	500 lbs.	560 lbs.
